- AWS Lambda

I'm a respectful and self-motivated Full Stack Developer. I'm great at finding solutions for software issues and learning new tech. Experienced in MERN stack (MySQL Express React Node) and offering skills in both Front-end and Back-end. I'm always working on a project trying to better myself. I know I'll be a great asset to your team. Fluent in Spanish and accustomed to working with people of all backgrounds and cultures.

Work History

2019-06 -
2019-06

Full Stack Developer

Websocket Chat

- Made front end using React and the back-end with express and node
- Styled website using CSS to make an intuitive UI for user
- Back-end keeps track of conversation and what to display to front end
- Uses web-socket for real time connection between two users

2019-06 -
2019-06

Back-End Developer

SMS Chatbot

- Front end made with react and back-end with node with express
- Designed so node handles the exchange of information between user, Twilio and Watson
- Composed architecture to allow multiple users texting back-end with no collision

2018-05 -
2019-05

Full Stack Developer

Face Recognition App

- Created user friendly front end with React and back end with node and express
- Created a session management system using NoSQL database Redis for speed and convenience to users
- Used MYSQL relational database and bcrypt to store hashes and session information
- Added Docker to make it easier to work on with different devices
- Added unit and automation testing using Jester

2018-01 -
2018-01

Unity C# Coder

Global Game Jam 2018, Austin, TX

- Game entry prized **2018 Nooby Award**
- Collaborated with team to establish goals and delegate code task
- Fixed bug that caused the game to crash when played by reviewing peers code and finding out Unity was calling two movement scripts at once causing infinite loops

2017-04 -
2017-04

Front-End Developer

Robot Contact Cards

- Created the single page application (SPA) using React
- Created the architecture of the site and implemented by making several components that are re-usable
- Added Redux to make the project more scalable
